[HIRING MANAGER]
[COMPANY]
[CITY]

Dear [HIRING MANAGER],

I am writing to apply for the position of [ROLE] at [COMPANY], which I discovered via [SOURCE]. As a full-stack developer specialized in React and TypeScript, with an engineering degree from ESPRIT and hands-on internship experience at companies such as Ooredoo, I am confident that my skills align closely with the requirements of this role.

During my final-year internship at Itserv, I designed and delivered a full-stack AI medical diagnosis application: a React/TypeScript frontend, a Flask REST backend, and a hybrid PostgreSQL/MongoDB database, supported by a complete CI/CD pipeline with Jenkins, SonarQube, and Prometheus/Grafana monitoring. This experience strengthened my ability to take ownership of a product from architecture through to deployment and observability.

My earlier internships reinforced these foundations. At Ooredoo I built secure Spring Boot services with an Angular and PrimeNG frontend, and at Ironbyte I delivered an educational platform whose scheduling algorithms improved planning efficiency by 40%. Across each role I worked within Agile teams, valued clean and well-tested code, and treated code review as an opportunity to raise quality.

I am particularly drawn to [COMPANY] because of [SPECIFIC REASON – product, mission, or technology]. I would welcome the opportunity to contribute to your team and to grow as an engineer in an environment that values craftsmanship and collaboration.

Thank you for considering my application. I have attached my CV and would be glad to discuss how I can contribute to [COMPANY] at your convenience.

Yours sincerely,

Yosr Ben Nagra
