Akur8
Human Resources
9th arrondissement, Paris

Dear Hiring Manager,

I am writing to express my strong interest in the Junior Software Engineer position at Akur8. Your mission to modernize insurance risk assessment through transparent machine learning and data-driven systems resonates deeply with my passion for building impactful, scalable solutions at the intersection of software engineering and AI.

As a Computer Science Engineering graduate from ESPRIT (Bac+5), I bring hands-on experience developing full stack applications with a strong foundation in modern backend and frontend technologies. My technical background aligns remarkably well with your technology stack: I have professional experience with Java/Spring Boot, Python, PostgreSQL, Redis, Docker, and cloud infrastructure, complemented by my primary expertise in React and TypeScript for building intuitive user interfaces.

During my internship at Ooredoo, I architected and developed an internal communication suite using Spring Boot, implementing layered architecture with DAO/DTO patterns, secure REST endpoints, and comprehensive unit/integration testing. This experience gave me deep expertise in Java enterprise development and the IntelliJ IDEA environment. The application served real-time communication needs while maintaining code robustness and scalability—skills directly applicable to building Akur8's complex SaaS platform.

Most recently at Itserv, I am completing my final year internship (PFE) building an AI-powered medical diagnosis application. This project combines machine learning (Hugging Face Transformers, TensorFlow) with a full stack architecture (React/Flask/PostgreSQL/MongoDB) and a complete DevOps pipeline featuring Jenkins CI/CD, SonarQube for code quality, and Prometheus/Grafana for monitoring. This experience has sharpened my ability to balance fast delivery with code quality—a key requirement you mentioned—while working with AI technologies in a production environment.

What particularly excites me about joining Akur8:

- **InsurTech Innovation:** Contributing to a platform that enables insurers to model risk 10x faster while maintaining transparency aligns with my interest in building solutions that create measurable business impact
- **Perfect Technical Fit:** Your stack (Java 21/Spring Boot, Python 3, AWS, PostgreSQL, Redis, Docker) matches my experience while offering opportunities to deepen my expertise in cloud computing and ML applications
- **Engineering Culture:** Joining a world-class tech team of 40+ nationalities where knowledge-sharing and collaboration are valued resonates with my team-oriented approach

- **Full Stack Ownership:** The opportunity to develop features end-to-end—from backend services to frontend interfaces for actuaries—appeals to my comprehensive development skillset

My profile offers several strengths for your engineering team:

- Proven full stack development experience with Java/Spring Boot, Python, and modern frontend frameworks
- Hands-on AI/ML experience (Transformers, TensorFlow) demonstrating interest in machine learning applications
- Complete DevOps mastery: CI/CD pipelines, Docker containerization, infrastructure monitoring, and code quality tools
- AWS cloud experience from deployment and infrastructure work
- Strong foundation in Agile/Scrum methodology with cross-functional team collaboration
- Fluent English enabling effective communication in your multicultural environment

While my education was completed in Tunisia, I understand the position requires authorization to work in Paris. I am prepared to discuss visa sponsorship options or relocation arrangements that would enable me to contribute to your Paris office.

I am particularly drawn to Akur8's recognition as a top InsurTech company and your commitment to diversity (Professional Equality Index 97/100). I would be thrilled to bring my technical skills, problem-solving mindset, and genuine enthusiasm for AI-driven solutions to help actuaries better understand their pricing strategies.

I am available to start within a reasonable notice period and would be delighted to discuss how my background in full stack development, AI integration, and DevOps can contribute to Akur8's continued growth and innovation.

Thank you for considering my application. I look forward to the opportunity to speak with you.

Sincerely,

Yosr Ben Nagra
